**SOME OF OUR SYSTEMS MICRO
REC2 20 G – REC2 100 G**

SWIMMING POOL of Biella

The center is equipped with indoor pool, outdoor pool, multipurpose gymnasium, bar - cafeteria. Indoor pool: Olympic 50 meters, divisible into two pools of 25 meters by a slide tray with the starting blocks. The lanes are regulations 8 and in this tank are regularly held races of local interest, regional and national levels. The grandstand, located on the long side, has a capacity of about 600 spectators. At the Cup Bremen, the number of appearances doubles, in function of a well organized arrangement of seats. Separately, there is also a spa with shallow water for courses.

University of Gastronomic Sciences Pollenzo (Cuneo)

The **University of Gastronomic Sciences**, founded in 2004 by the international non-profit association **Slow Food** in cooperation with the Italian regions of Piemonte and Emilia-Romagna, is a ministerially recognized, private non-profit institution. Its goal is to create an international research and education center for those working on renewing farming methods, protecting biodiversity, and building an organic relationship between gastronomy and agricultural science. The result is a new professional figure – the gastronome – skilled in production, distribution, promotion, and communication of high-quality foods. Gastronomes are the next generation of educators and innovators, editors and multimedia broadcasters, marketers of fine products, and managers of consortia, businesses, and tourism companies. UNISG students, hailing from around the world, gain dynamic experiences in artisanal and industrial food production, thanks to complementary education in both science and humanities, sensory training, and hands-on learning during *study trips* (field seminars) across five continents. To date, more than **1000** students have studied or are studying at UNISG.

REC2 50 G dairy

REC2 40 G at the retirement home

Retirement homes usually have many rooms also equipped with electronic medical equipment, as many bathrooms, common areas and kitchens. All these environments require electricity, heating and hot water in large quantities and with reliable performance to meet the needs of the elderly.

The answer to these needs, which also allows us to save considerable amounts on consumption, is found in the use of Enerblu cogeneration micro-cogeneration plants!

Our systems are able to provide adequate comfort to guests and allow the administrator to rationalize costs decisively.

REC2 100 G

The company provides the service of washing of vegetables package for supermarkets and large-scale retail trade

REC2 100 LPG - installed in a dairy in southern Italy

The history of the cheese factory La Baronia begins on February 19 th 1990, the day when the cousins Luca and Alfonso Cutillo give life to a dairy production following the ancient canons.

For nearly 30 years, the buffalo milk collected in these places, in a hilly area of the province of Caserta in Campania called north of Caserta, at the foot of the ridge of mountain Maggiore, gives to our products the smell and taste of nature, leaving unique and genuine flavors able to fully respond to the dictates of the D.O.P. which they belong to.

The quality and clean air, the salts present in the soil in an area free of industrial settlements and the favorable wind, identify the origin and authenticity of the raw material that we use for our entire production.

DAIRY BRAZZALE spa

REC2 400 G overheated water

The company deals not only with UHT milk and cream, but above all with the packaging of cheeses which in those years had enormous development. The Brazzale family thus realizes a modern cutting, grating and packaging plant at the Zanè headquarters, in which it transfers all its love for quality and excellence. The role of important producer of various types of cheese offers the opportunity to be at the forefront of the market for efficiency and convenience. Even in packaging, the group applies its philosophy centered on quality and seriousness. The international vocation of the group, which owns agro-industrial plants in central Europe and in South America, facilitates over the years the development of an intense export sales activity, both of packaged products and in forms.

REC2 240 G Hospital

DAIRY ZOGI srl - Monte di Malo (VI)

REC2 309 G indoor with steam generator 4 bar

Dairy company founded in 1962 for the production of Provolone. Between 1993 and 1995, he achieved a significant innovation, installing modern production facilities and proposing ambitious goals in terms of food safety, product traceability, environmental protection and consumer satisfaction.

Since 1999, alongside the provolone, the production of spun paste without preservatives has been started and, since the summer of 2001, it is able to supply its customers Provolone Valpadana PDO manufactured without the use of additives and preservatives.

The plant was integrated with new departments for the production and maturing of Asiago DOP, of which the Consorzio di tutela.

The range of Spun Pastes has also been greatly strengthened.

Finally, a cheese cutting and packaging department was developed to respond adequately to the demands of modern distribution.

Currently in the Monte di Malo plant, it produces 10 tons of cheese every day, which it matures and packs in large part.

REC2 500 G at the dairy industry of the province of Trento

Trentingrana cheese is a mountain product, controlled by the production of fodder and milk, until the processing and marketing of the finished product. It is a product that distinguishes itself from similar lowland productions due to its organoleptic qualities - such as the special fragrance, aroma, taste in perfect balance between sweet and savory - which make it palatable for all palates. Produced since 1926 only with selected milk, rennet and salt, it is ready after maturing for 18/20 months and beyond. Only a hundred thousand forms are produced per year.
