

## About us

ecoLocked is providing a turnkey solution for the construction industry to build with truly climate-neutral concrete and optimized performance.

**Our solution:** We convert captured carbon from local biomass residues (biocarbon) into robust concrete admix materials. These **'ecoLocked materials'** permanently inset captured CO<sub>2</sub> in the built environment, reducing the need for clinker cement and improving building performance.

# ecoLocked

Turning buildings into carbon sinks

[www.ecoLocked.com](http://www.ecoLocked.com)

## Our offer

Admix materials with functional benefits

Customized climate-neutral recipes

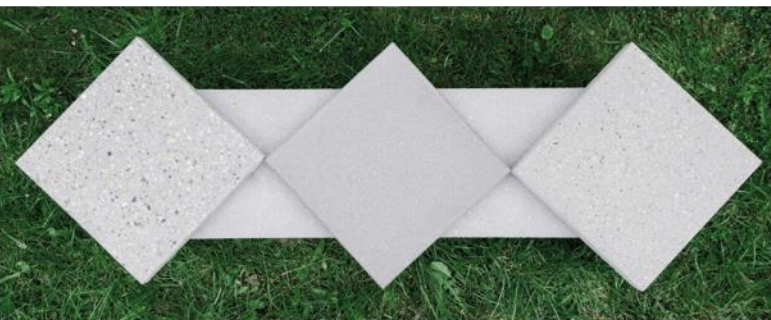

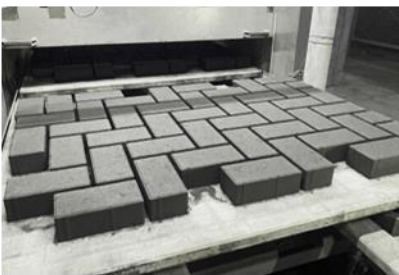

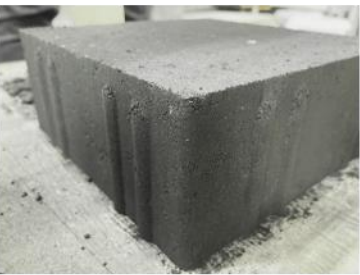

Technical consulting

CO<sub>2</sub> credit management

A carbon-neutral concrete bench in collaboration with BNB Potsdam.

# Functional benefits

CO<sub>2</sub> footprint reduction >100%

Improved durability

Increased thermal insulation

Weight reduction

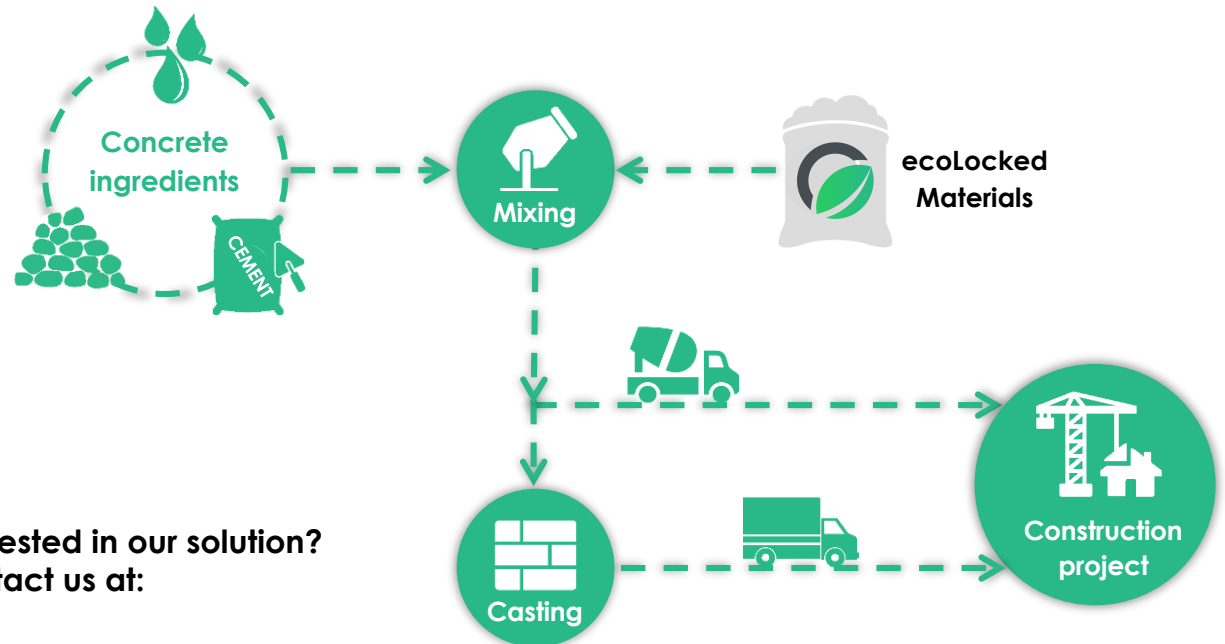

Accelerated/delayed curing

Pigmentation

# How it works

Concrete manufacturers receive drop-in ready admix materials, along with customized recipes that are easy to integrate into existing processes and no CAPEX investments are necessary.
