

A hand is shown holding a blue and grey geometric concrete block. The block is a triangular prism with a blue top surface and grey sides. The background is a field of green grass. The entire image is framed by a white border.

Building The Future

CarStorCon®
Technologies

Clim@Add® - our biochar-based additive for the construction industry

Our biochar-based additive Clim@Add® consists of up to 94 % technical carbon. It reduces the carbon footprint of mineral building materials by up to 100 % and improves the material properties of concrete and asphalt. Inserted in concrete and asphalt, permanent carbon sinks are created. The addition of Clim@Add® allows a reduction in scarce and resource-intensive raw materials.

- Up to 100 % carbon footprint reduction of mineral construction materials
- Up to 15 % cement savings
- Up to 3 kg CO₂ savings per 1 kg Clim@Add®

We have already realized over 7000 m³ in pre-cast and ready-mix concrete and we are looking forward to realizing your project with climate concrete or climate asphalt together with you!
