

YOUR BIOGAS PROJECT :

**VALUE AGRICULTURAL
MATERIALS INTO ENERGY!**

YOUR PROJECT from A to Z

1 STUDY / BUSINESS PLAN
We define quickly and efficiently, according to your data, the best way to make your project successful, technically, biologically, and economically.

2 DESIGN
Méthalac's design office will carry out the layout, drawings, and technical study of your project so that your biogas plant fits in with your operation.

3 REALIZATION
Our experienced technicians install proven equipment in the biogas sector from the European market. They will ensure the good realization of your plant.

4 COMMISSIONING
Our engineers design the automation program, commission it on-site and train you in its use. Our mastery of new technologies will ensure the best possible start-up for your biogas plant.

5 OPERATIONS
Our teams can monitor your plant in real-time, our assistance is available 24/7. We ensure the electrical, mechanical and biological monitoring of your plant to optimize its profitability.

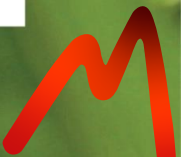

THE BENEFITS

The exploitation of a biogas plant allows you to valorize your agricultural materials and to produce several types of energy: biomethane, green fuel, heat, electricity, and also a green fertilizer.

Your biogas plant operates all year round and 24/24h regardless of weather conditions, season, or other external factors.

**Our biogas plant-
Your energy and financial diversification!**

METHALAC IN FIGURES:

10 years of experience

50 biogas plants in operation

14 units under construction

20 projects under study

50 engineers and technicians at your service

Our knowledge, our experience, our skills, all that we have acquired over the last ten years, we put them at your service today!

We guarantee you the realization of your project of biogas plant, which will allow you to release an additional income and to make a gesture for the environment.

With all my wishes of success!

*Laurent Pauchard
CEO & FOUNDER*
